M3 stylesheet comparison

Hans Jacob Rosini | IT0043 Portfolio | css/style.css compared with ai-style.css

How the measurements were made

Rules are qualified selectors; comma-separated selectors count separately and at-rules are excluded. Selector depth is the number of compound selector groups. Color literals and repeated hex values are counted from the source. Contrast ratios use WCAG relative luminance for the text pairs listed on page 2; the body-text threshold is 4.5:1.

Measure	css/style.css	ai-style.css
Qualified selectors	60	39
Deepest selector	.skills-table thead (2 groups)	.site-header .header-inner .site-nav a:hover (4 groups)
!important	0	1
Hard-coded color literals	10: 9 hex values defined as tokens + 1 RGB shadow; text/background colors use tokens	32 hex occurrences, written directly in rules
Repeated hex colors	0 repeated hex values	7 repeated values: white (10), navy (6), muted (3), and four values twice
Named vs token-based colors	29 color-token references; 0 named colors	0 color-token references; 0 named colors; hex literals used

Interpretation

The custom stylesheet uses more selectors for page, form, and table details. The rival has fewer selectors but deeper nesting and an !important override. Both use zero named color keywords. This generated stylesheet is AI-assisted and must not be presented as unaided student work.

Contrast and 320 px review

Pass means at least 4.5:1. No large-text exception was applied; button labels are normal-size text.

Stylesheet / interface pair	Foreground / background	Ratio	Result
Custom - body on page	#193247 / #f4f7fa	12.29:1	PASS
Custom - body on card	#193247 / #ffffff	13.22:1	PASS
Custom - muted on page	#526779 / #f4f7fa	5.46:1	PASS
Custom - muted on card	#526779 / #ffffff	5.87:1	PASS
Custom - navigation/footer	#ffffff / #103e60	11.17:1	PASS
Custom - button/active nav	#ffffff / #155c91	7.07:1	PASS
Rival - body on page	#526779 / #f4f7fa	5.46:1	PASS
Rival - body on card	#526779 / #ffffff	5.87:1	PASS
Rival - headings on card	#193247 / #ffffff	13.22:1	PASS
Rival - normal navigation	#e7f3fb / #2675a8	4.44:1	FAIL
Rival - hovered/current nav	#ffffff / #164c70	9.12:1	PASS
Rival - primary button	#ffffff / #d6a640	2.24:1	FAIL
Rival - secondary button	#ffffff / #155c91	7.07:1	PASS
Rival - footer/table head	#ffffff / #193247	13.22:1	PASS

320 px findings

Version	What breaks at 320 px	Follow-up
Custom starter, before fix	Three-column cards become cramped; table can exceed content width without a scroll region; header items compete for one row.	Added stacked header, one-column cards, and a labelled table scroll region.
Custom, after fix	Header stacks, cards become one column, and the table scrolls inside its region. No page-wide overflow is expected from these rules.	Separate commit: "Fix narrow layouts with wrapping and table scrolling."
Rival stylesheet	Navigation remains one row, cards remain three columns, and the table has no overflow treatment; page width may expand.	Rival source left unchanged. Fixes were made only to css/style.css and shared preview markup.

Method limit: no browser renderer was available. The 320 px findings are a static inspection of HTML/CSS rules, not screenshot-based browser testing. Ratios were calculated from listed hex values with the WCAG contrast formula.
